m.Monitor

A native EMC Smarts Mobile App for Event Management, Root Cause Analysis and Cross-Silo Collaboration

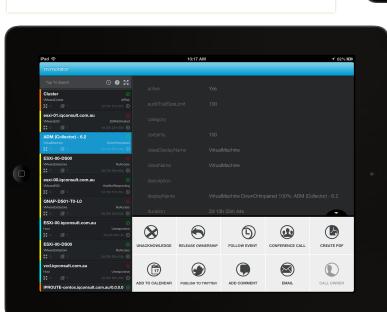

All IT infrastructures experience breakages and downtimes.

Monitoring technologies allow us to observe events that occur throughout the infrastructure, however these events can occur any time.

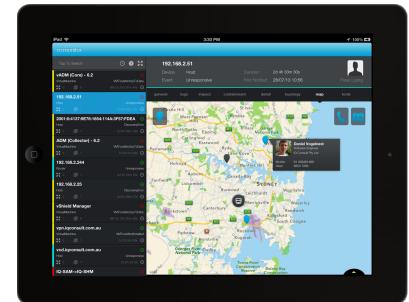

Often, it's very difficult to collaborate across silos with all infrastructure stakeholders to pinpoint and solve problems.

iQ Consult has the perfect tool: m.Monitor, allowing your staff to reduce response and resolution time of issues in your infrastructure with instant collaboration.

201/25-29 Berry Street North Sydney 2060 NSW. Australia

- Root Cause Analysis
- Push Notifications
- Follow events
- Sharing
 - Start conference calls instantly from your mobile device with your team
 - Create emails containing event information
- Event Location View
- Identify engineers nearest to event location via map console.
- Infrastructure topology view
- Run Remote Tools straight from your mobile device, e.g. ping severs to determine reachability
